Double Dropwort*

Filipendula vulgaris 'Flore Plena'

Plant Height: 18 inches

Flower Height: 24 inches

Spread: 18 inches

Sunlight: ○ ● ●

Hardiness Zone: 2

Other Names: Meadowsweet

Ornamental Features

Double Dropwort features delicate panicles of white flowers at the ends of the stems from early to mid summer. The flowers are excellent for cutting. Its serrated narrow compound leaves remain dark green in color throughout the season. The fruit is not ornamentally significant.

Landscape Attributes

Double Dropwort is an herbaceous perennial with an upright spreading habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Double Dropwort is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use

Planting & Growing

Double Dropwort will grow to be about 18 inches tall at maturity extending to 24 inches tall with the flowers, with a spread of 18 inches. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years.

This plant performs well in both full sun and full shade. It is quite adaptable, preferring to grow in average to wet conditions, and will even tolerate some standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
